TITLE: The effect of ethephon on flowering and fruiting in
cucumber

Efeito do acido 2-cloroetilfosfonico (ethephon) no
florescimento e na frutificacao do pepino (Cucumis
sativus L.)

AUTHOR: Churata-Masca, M. G. C.; Awad, M.

ENTRY DATE: Entered STN: 19941101
Last Updated on STN: 19941101

AB In 2 experiments in the greenhouse ethephon from 100 to 500 p.p.m. was applied once or up to 5 times to the monoecious **cucumber** cv. Aoday at the seedling stage and at later stages of growth. Increasing rates of ethephon from 100 to 400 p.p.m. increased the number of female flowers, mainly on the main stem, and decreased the number of male flowers, mainly at higher nodes. Ethephon at 500 at the seedling stage followed by 2 applications at 250 p.p.m. **transformed** the monoecious cv. into a gynoeocious cv. Ethephon treatments at 200 or 400 p.p.m. enhanced early yields but did not affect total yields. Repeated ethephon sprays did not affect the number of mature fruits/**plant** or the seed germination percentage but **reduced** fruit weight and seed production, **plant height** and **internode** length.
